

ARTUR KURAMSHIN

<https://akuramshin.github.io> | Toronto, Ontario, Canada | artur.kurams@gmail.com | (647) 409-3118

SKILLS

Languages: Python, C, C++, TypeScript, Java

Libraries: PyTorch, JAX, ROS 2, OpenCV, MoveIt, Isaac Gym, MuJoCo

Tools: Docker, k8s, ClearML, Jira, Git, Slurm, Linux, Prometheus

PUBLICATIONS

Artur Kuramshin, Ozgur Aslan, Cyrus Neary, Glen Berseth. "**Task Robustness via Re-Labeling Vision-Action Robot Data.**" 2026 IEEE International Conference on Robotics and Automation (ICRA). [[project page](#)]

Cyrus Neary, Omar G. Younis, Artur Kuramshin, Ozgur Aslan, Glen Berseth. "**Improving Pre-Trained Vision-Language-Action Policies with Model-Based Search.**" 3rd Workshop on Learning Effective Abstractions for Planning, CoRL 2025. [[paper](#)]

EDUCATION

Mila & University of Montréal

Sept 2024 - **Present**

Master of Science in Computer Science (Artificial Intelligence and Robotics)

- **Supervisor:** Prof. Glen Berseth, co-director of the Robotics and Embodied AI Lab, Core Mila Member, CIFAR AI Chair.

University of Toronto - St. George Campus

Sept 2018 - May 2023

Honours Bachelor of Science in Computer Science, CGPA: 3.70

- **Awards:** Ted Mossman Scholarship

EXPERIENCE

Junior DataOps Engineer, Sanctuary AI

March 2024 - Sept 2024

- Built and maintained pipelines for capturing and cleaning robotic teleoperation data in both simulation and real environments, drastically accelerating ML model training iterations.
- Improve automatic ML training pipelines by reducing setup time overhead by 50%.
- Created better observability over ML training pipelines with Prometheus instrumentation.

Software Co-op Machine Learning, Sanctuary AI

Summer 2022, Summer + Fall 2023

- Designed and developed a modular computer-vision data processing pipeline for generating pseudo ground truth information for SLAM deployed on *ClearML*.
- Developed and deployed a semi-automated, web-based 6D object pose annotation tool using *AngularJS* and *python*.
- Designed an optimization-based framework to synthesize and evaluate dexterous grasping of novel object geometries.
- Set up massively parallel experiments in *Isaac Gym* to evaluate the robustness of object grasps.

Research Master's Student, Robotics and Embodied AI Lab

Sept 2024-**Present**

- Proposed a novel VLM-based data augmentation pipeline to address modality imbalance in VLA models, improving instruction-following robustness in simulation experiments.
- Collaborated on a multi-institutional benchmarking effort, conducting rigorous head-to-head VLA policy evaluations on DROID hardware.
- Engineered an end-to-end teleoperation and data-collection stack with hardware integration for a Franka Emika Panda arm integrated with a LEAP dexterous hand.
- Deployed and stress-tested SOTA VLA models on physical hardware to identify failure modes and inform future research directions.
